Release information

Release Date: August 19, 2023

Release Version: 23.08

Introduction

This document describes the features and functionality of this release of FAMIS 360. Enhancements include User Interface and API enhancements.

After the deprecation of Internet Explorer in June 2022, we no longer support the browser for running FAMIS 360. We recommend using Microsoft Edge instead.

The features highlighted below are now available. For more information or to learn how your organization can start using these features, please contact our sales team at 800-774-7622 or contact your account executive.

Enhancements

Comment field added on time entry #60358

We enhanced the Timecard **2.0** Module to include an editable comment field, allowing you to input comments along with time entries. This feature provides you with the ability to provide additional context or details for your time entries, improving communication and record-keeping.

Unit Of Measure column added to Material Cost Summary #50407

UOM (Unit of Measure) column has been added to enhance clarity in the **Material Cost Summary**. The new column has been added to the **Material Cost Summary** on the **Receipts** tab in **WO Financials**.

Improvements and issues fixed

Component	Summary	Reference #
API	We enhanced the Work Order API by adding a CustomerPO#/line to a Work Order and by allowing updates to the Customer PO#/line , Authorization Remarks , and Email CC fields. Previously, attempting to update these fields using the WO PATCH resulted in errors.	48993

Component	Summary	Reference #
TimeCard	We enhanced the TimeCard Reporting functionality to handle comments more effectively. Now, when time is entered in the TimeCard module without a comment, the tcd_comments column will be handled consistently, preventing any NULL value exceptions in the reporting process.	52545
Space	We addressed an issue where users encountered difficulty assigning a surveyor to a new space survey. Clicking on the selector and entering a person's name into the select box for a surveyor resulted in a console error, preventing successful assignment. As part of this enhancement, full users with create and edit survey security rights and access to the space they are adding, can now assign an individual surveyor to that space, even when departmental-based security is turned on.	54367
Logbook	We resolved an issue related to assigning work orders to users in different region hierarchies. With this enhancement, users with access to the same property or region associated with a work order can assign the work order to each other without any issues.	58802
Work Order	We addressed an issue with the new Create Request screen when creating a work order from a Project. Previously, the Create Request screen did not capture the Project information for the created work order, making it difficult for users to identify the association between the two. Now, when you create a work order from a Project, the Project information will display in the Create Request screen, improving visibility.	60354
Work Order	We addressed an issue where the Find Request screen no longer displayed red boxes next to overdue work orders, which was a feature in the old User Interface. Now, the Find Request screen will once again display red boxes next to overdue work orders, restoring the visual indicators for timely attention.	60383
Work Order	We resolved an issue with the Mass Update functionality on the Find Request screen, where using a smaller screen (such as a laptop screen) resulted in the screen cutting off the Update button and the X to close the modal. This made it difficult for users to interact with the modal and exit it.	60430

Component	Summary	Reference #
	Now, you can easily close , update , or cancel the modal without any issues, regardless of the screen size.	
Work Order	We resolved an issue where the View PO and View PR lists no longer stuck to the area of the page where they were opened. Additionally, the lists could not be scrolled far enough down to see all POs or PRs associated with the work order. Now, the View PO and View PR lists will stay with the View PR/PO dropdown.	60431
Work Order	Previously, guest users were unable to print work orders without the side menu bar. Pressing Ctrl + P included the side menu bar in the print view, which was not desirable. With this enhancement, guest users can now print their work orders in an expanded view without seeing the Navigation Bar.	60433
Integration	We addressed an integration issue where work order updates via the Mass Update functionality were not reflected in VFA. With this enhancement, the Mass Update of work orders will now push the information and updates to VFA when the integration is turned on, ensuring consistency and accuracy between FAMIS360 and VFA.	60456
Reports	We addressed an issue where the Space UDF Report was pulling in UDFs (User-Defined Fields) found on the Space and on the Complex Allocation. With this enhancement, the Space UDF Report in the Space module will only display UDFs from the Space module, ensuring accurate and relevant data.	60479
WO Financial	We resolved an issue where the Request History erroneously displayed that the Estimate was changed to \$0.00 when a Work Order was reclassified. However, the estimate was still in place despite the misleading information in the Request History. Now, the Request History will accurately reflect updates to the Work Order Estimate only when changes are made to that specific field during reclassification.	60542
