Release Version: 23.09

Introduction

This document describes the features and functionality of this release of FAMIS 360. Enhancements include User Interface and API enhancements.

After the deprecation of Internet Explorer in June 2022, we no longer support the browser for running FAMIS 360. We recommend using Microsoft Edge instead.

The features highlighted below are now available. For more information or to learn how your organization can start using these features, please contact our sales team at 800-774-7622 or contact your account executive.

Improvements and issues fixed

Component	Summary	Reference #
API	We addressed an issue related to the Get Blanket Purchase Order Headers API , where a 500 error returned in certain cases. To resolve this issue, we made modifications to the sub-query to ensure the expected Purchase Order (PO) output is obtained. It is important to note that this change does not impact the functionality of the API.	50486
API	The POST method on the Attachment API limited the file name to under 30 characters, causing errors when uploading attachments to WOs. The User Interface allows 30+ character file names which is inconsistent and inconvenient for users. We enhanced POST method on the Attachment API to accept file names exceeding 30 characters, aligning with UI behavior. Users can now upload attachments seamlessly.	59024
Logbook	We corrected two issues related to the Logbook module Project View: 1. The sort order of the child work orders (WOs) did not follow standard patterns (such as Request ID, assigned to, or property).	56571

Component	Summary	Reference #
	2. When viewing the Project View for a work order, the Date/Times for Date displayed in UTC instead of the time zone associated with the property of the WO. We implemented the following changes: 1. Sort Order of Child WOs: When viewing the Project View of the child/parent WO list, the child WOs will now order based on their WO ID numbers. This logical sorting will make it easier for users to locate and work with specific child WOs. 2. Display of Date with Time Zone: In the Date field, the displayed Date/Times will now reflect the corresponding Time Zone associated with the property of the WO. For cases where multiple time zones are involved, the displayed time will be accompanied by the Time Zone initials (e.g., 9:15 AM ET). This adjustment aims to eliminate confusion and provide clear information to users.	
Space Survey	We resolved an issue where Space Surveys with over 20 occupants could not be updated, resulting in a blank portion. This limitation prevents users from effectively managing Space Surveys with many occupants. We implemented an enhancement that increases the node count limit. This update allows users to update Space Surveys with more than 20 occupants, ensuring that the portion is no longer blank.	58624
Find Request	We resolved an issue where the Complete By header on the Find Request page did not sort the work orders in ascending or descending order based on their Complete By dates.	60384
Work Order	We identified an issue with the inconsistent spacing of fields that have Select and Clear options in both full screen and split screen views. The spacing between these options will now be consistent in both modes, providing a more visually pleasing and user-friendly experience.	60386

Component	Summary	Reference #
Journal Extract	Users were experiencing an issue exporting a journal entry on the Journal Extract page. You can now export a journal entry without the timeout error.	60679
Complex Allocations	(From Hotfix 23.7.1) Previously, UDF values added through the API were not visible in the UI when viewing new Complex Allocations because they lacked a space ID and header ID. This enhancement allows users to seamlessly add and view UDF values for Complex Allocations, resulting in a more comprehensive and streamlined experience.	60724
