Release information

Release Date: February 24, 2024

Release Version: 24.02

Introduction

This document describes the features and functionality of this release of FAMIS 360. Enhancements include issue fixes, Logbook, and Purchase Order enhancements.

After the deprecation of Internet Explorer in June 2022, we no longer support the browser for running FAMIS 360. We recommend using Microsoft Edge instead.

The features highlighted below are now available. For more information or to learn how your organization can start using these features, please contact our sales team at 800-774-7622 or contact your account executive.

Audit Trail Enhancement

(60454)

Refactored **UserPropertyAssociation** and **UserRegionAssociation** endpoints to incorporate audit trails, capturing **UpdateDate** and **UpdatedById** in the **LGB_EMP_RGN_PROP** table. Historical data defaults to Accruent admin account initialization. The repository pattern is now applied to POST and PATCH methods, and GET requests return the new audit fields, ensuring comprehensive tracking of user associations.

Improvements and issues fixed

Component	Summary	Reference #
TimeCard	Previously, when a user associated with multiple crews changed the crew assignment for a Work Order in the Timecard Module, the system failed to update the labor rate accordingly. For example, switching from "Transportation Drivers" (rate of \$32.40) to "Temp Landscape" (rate of \$13.75) only updated the crew description, leaving the original rate applied. With the latest fix, when the assigned crew on a Work Order (WO) is changed, FAMIS now correctly updates the labor rate to reflect the rate of the newly selected crew.	54369

Component	Summary	Reference #
WO Financial	Resolved an issue on the Work Order Financial screen where material cost details were truncated without hover-over text functionality, or any other way to expand the text. The fix aligns all cost fields in Work Order Financials , introducing hover text for full visibility of truncated descriptions and ensuring consistent display of cost-related information.	60677
Work Order	Fixed a bug where reassigning schedules and work orders failed for users with apostrophes in their names. The update now allows FAMIS 360 users with editing permissions to successfully reassign work orders to users with apostrophes or other special characters in their names, ensuring error-free updates to user details.	61088
Purchasing	Resolved an issue in Purchasing 2.0 where attachments with special characters, such as '&', could not be deleted from Purchase Orders. The fix includes removal of the filename parameter check and the addition of server-side validation to confirm user privileges for document deletion, ensuring consistent functionality across the platform.	61329
Schedule	Fixed an issue where users were unable to edit labor costs through the SCHEDULE - FINANCIAL page, while editing was possible via the Work Order - FINANCIAL link, enabling labor cost modifications in both the SCHEDULE - FINANCIAL section and the Work Order - FINANCIAL link for the V1 UI.	61397
WO Financial 2.0	Resolved a critical issue where a 500 Internal Server Error occurred on the SCHEDULE - FINANCIAL page. The fix ensures that no errors are generated when accessing the SCHEDULE - FINANCIAL section.	61448
Complex Allocations	Addressed an issue from the 24.01 Release where users encountered errors when editing Complex Allocations . The unspecified error has been corrected, enabling users to modify complex allocations without error interruptions.	61563
Work Orders	Resolved an issue where the Parent/Child WO section on the Request Details page showed an error when a work order had a Parent or Child relationship. Users can now view and collapse the Parent Child Work Orders and Maintenance Types section regardless of bill code associations.	61576
